

## ARADHNNNA REDDY

San Antonio, TEXAS 78255 • (210) 381-0036 • aradhnnareddy@gmail.com

*Computer Science graduate focus on cybersecurity and data analytics. Leveraging a minor in Psychology to bridge technical systems and human behavior, supporting data-driven insights, security awareness, and responsible technology design and development.*

### EDUCATION

**University of Texas at San Antonio** – San Antonio, Texas.

**Degree: Bachelor of Science in Computer Science**

**Dec 2025**

*Minor in Psychology. Concentrations in Cybersecurity and Data Science.*

### SKILLS

- |                                                                 |                                                              |                                                                                  |
|-----------------------------------------------------------------|--------------------------------------------------------------|----------------------------------------------------------------------------------|
| • Languages: Java, C, JavaScript, HTML/CSS, Python, SQL.        | • Experience with SAP Hana and Joule                         | • Responsive                                                                     |
| • Tools & Libraries: OpenCV, NumPy, PyWavelets, NLP, AWS, MySQL | • Flexible and adaptable                                     | • Relevant Concepts:                                                             |
|                                                                 | • Translating technical findings into usable organized data. | Data Structures, Applications                                                    |
|                                                                 | • Able to handle ambiguity                                   | Programming, Cryptography, Artificial Intelligence, Algorithms, Web Technologies |

### EXPERIENCE

• **Database System for Music Shop Management** – SQL. Lead a team of five in designing and implementing a relational database system meant to support inventory, sales, and customer management to streamline operation for music shop owners.

o Gained valuable leadership experience along with learned how to develop efficient SQL queries to make a fully functional and user-friendly backend-system capable of outputting data-driven insights.

• **Sentiment Analysis of Movies and T.V. Shows** – Python. Developed a comprehensive analysis system in a team of three using various types of machine learning and lexicon-based approaches to assess emotional tone used in user reviews of films and T.V. shows.

o Operates large datasets using natural language processing techniques (tokenization, lemmatization, vectorization). Built and evaluated five different models to gauge performance and accuracy. Focused on model validation and bias awareness when analyzing sentiment datasets. Results were able to be shown through visualization and showed promising results for demonstrating learning capabilities.

• **Discrete Wavelet Transform (DWT) QR Steganography Tool** – Python. Covertly embedded and extracted QR-encoded data in images using frequency-domain (DWT) techniques.

o Implemented binary file handling, error correction, and robust extraction methods. Applied OpenCV, NumPy, PyWavelets, and PIL for secure image processing.

• **Web Development & Server Deployment** – HTML, CSS, JavaScript, PHP, SQL. Explored UI/UX fundamentals through building a personal AWS server (EC2) over a 6-month period. Used Site to build sample webpages, create puzzles, custom layouts, and building relationship between HTML, CSS, and JavaScript. Integrated backend functionality using PHP and MySQL databases to create dynamic content.

o Learned to deploy websites on self-configured AWS server, gaining knowledge on cloud hosting, domain setup, server management, and full-stack web development.

• **RowdyBall** – Java. Collaborated with a team of four to create a Magic 8-Ball application that provides a randomized answer to user-inputted questions.

o Utilized object-oriented programming and GUI design principles.

### INVOLVEMENT

**Current Endeavor: Post Graduate Program in Artificial Intelligence and Machine Learning: Business** May 2026 – Oct 2026

**Applications** – University of Texas at Austin, McCombs School of Business

**Sandwich SEVA**

**2023 - Present**

• Volunteered 70+ hours overlooking groups of five or more.

• assembled, packed, and dropped off 250+ sandwiches in donation efforts at Haven for Hope each week.

**Association of Computational Machinery (ACM)**

**2022 – 2025**

• Organization that discusses various aspects of technology and computer science, hosts hackathons and various fundraisers.

**Sitaara – Liaison**

**2022**

• Led 32 students from Rice University. In charge of navigating room and board, food, water, practice spaces, and other needs.
